Charlotte Young.

Executive summary

Trevince Estate is a family-managed heritage estate whose 800-year continuity rests on a functional balance between financial sustainability, visitor and community engagement, and stewardship-led practice — run by dedicated and resourceful owners who, like any small team, have only so many hours in the day. This report investigates whether inclusive, land-based educational provision for young adults with learning disabilities could be integrated within that system without compromising it.

The study adopted an applied exploratory case study design, triangulating three evidence strands: secondary analysis of Cornwall's provision landscape, a semi-structured interview with the Head of Education at Kehelland Trust, and a structured organisational feasibility assessment of the estate's spatial and operational configuration.

Three findings carry the analysis. First, a nationally evidenced employment gap exists for young people with learning disabilities at the transition from education to adult life, and Cornwall's provider landscape — while active — addresses this only partially and with finite capacity. Second, the estate offers underutilised resources with immediately usable programme space and indoor contingency available without development. Third, established delivery partners and funding routes operate within Cornwall, meaning the estate could access provision without building delivery capability independently.

The evidence indicates conditional feasibility. Three recommendations follow, sequenced as stages rather than parallel options — each building the operational evidence and stakeholder confidence the next requires. First, establish the estate as a host employer for supported placements at zero staffing cost, gaining productive labour and freeing owner time for strategic work. Second, formalise a host-site partnership with a registered provider, generating income through use-of-space fees and compounded labour value. Third, pursue conversion of the barn as a shared-use facility through heritage capital funding, reducing estate exposure to approximately £100,000 with payback within five years. Each stage can stop without material loss. The pathway is designed around the estate's capacity rather than against it — and, if realised, would deepen the estate's community role, diversify its revenue base, and extend its stewardship mission into the next generation.

Statement of Artificial Intelligence Usage

Claude Sonnet 4.6 and Claude Opus 4.6 (Anthropic 2025) was used as a collaborative drafting tool throughout the preparation of this report, supporting clarity, academic tone, structural refinement, and the development of visual frameworks. In each case, analytical arguments and interpretive conclusions were formed from my own research and primary data before AI was used to help express and develop those ideas with greater precision and academic appropriateness.

All research decisions, source selection, framework application, analytical judgements, and recommendations presented in this report are my own. I take full responsibility for the content, arguments, and conclusions presented.

1. Introduction

1.1 The Estate Configuration

Trevince Estate has been held by the same family for over 800 years. Its continued operation as a coherent, family-managed landholding — through periods when comparable estates were lost to debt or subdivision — is evidence of a durable strategic logic.

The estate operates as a mixed-use system across a substantial rural site in Cornwall, spanning hospitality, horticulture, residential lettings, renewable energy, and several underutilised built structures with planning permissions. Intangible assets are equally significant: heritage identity, ecological knowledge, and social capital within local networks represent resources that are rare, historically embedded, and difficult to replicate — the foundations of sustained competitive advantage under a Resource-Based View (Barney 1991).

Figure 1: Baseline Estate Asset Map

Author's own, produced using Canva Pty Ltd (2026) and Chat GPT 5.4 Thinking Image generation OpenAI (2025).

The estate's endurance reflects a functional balance across three interdependent dimensions: financial sustainability through diversified revenue; visitor and community engagement, now an emerging priority as the café and gardens reopen; and stewardship-led practice, which underpins land management across a 200-year planting horizon. These dimensions are not independent — change within one exerts pressure on the others.

Figure 2: Conceptual model of the estate's strategic configuration

Author's own, Visual structure informed by strategy map logic (Kaplan and Norton 2003). Produced using Claude Sonnet 4.6 (Anthropic 2025).

All three are maintained by a core team of three people. Across multiple engagements, the owners consistently identified time and people as the primary limit on what the estate can take on. Any proposed development must be evaluated within that reality.

1.2 The Research Question

This report forms one strand of a wider consultancy project examining the estate's future development. Parallel research investigates visitor experience, retail, and commercial diversification, whilst the present study contributes depth within the strand of education, stewardship, and land-based provision.

The research question emerged from the intersection of the estate brief and the researcher's professional background in learning disability services. Sarasvathy (2001) argues that purposeful entrepreneurial thinking begins from what you know and what you care about — treating prior experience as a legitimate starting point rather than a source of bias. Shane (2000) similarly demonstrates that opportunity recognition is sharpest in domains where the researcher holds existing knowledge. The intersection of heritage land management and inclusive provision for adults with learning disabilities is one this researcher is specifically positioned to investigate.

This report does not begin with a predetermined model. It investigates whether the conditions exist at Trevince to support inclusive, land-based educational provision — and allows the evidence to determine what form, if any, that might take. The question is not straightforward: inclusive educational provision introduces safeguarding frameworks, defined supervision ratios, and structured accountability requirements that operate under fundamentally different conditions from discretionary visitor activity (Heslop et al. 2014; Timothy 2020; Ofsted 2025). These are not objections — they are conditions that must be tested.

Four objectives structure the investigation: the demand and provision landscape in Cornwall; the estate's spatial and operational compatibility; delivery and partnership structures; and a feasibility synthesis with actionable recommendations. Each build on the last, moving from external context inward to the estate itself, and from description toward decision.

2. Methodology

2.1 Research Design

This study adopts an applied exploratory case study design, positioned within an interpretivist philosophy and following an inductive approach (Saunders et al. 2023). A case study strategy is appropriate where the research examines a contemporary phenomenon within its real-life context and where the boundaries between phenomenon and context are not clearly defined (Yin 2018). Jack and Baxter (2008) note its value for evaluating programmes and developing interventions within complex settings.

Figure 3: Research Design Overview

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025).

2.2 Evidence Strands

Data collection combines three complementary strands, each mapped to specific research objectives and together forming a multi-method qualitative approach that strengthens analytical credibility through triangulation (Stake 1995).

Secondary research established the provision landscape, demand context, and regulatory parameters. This was essential to Objectives 1 and 3, where landscape-level analysis is required that primary research alone cannot provide. A semi-structured interview was conducted with Adam Shore, Head of Education at Kehelland Trust, purposively selected for his direct experience of inclusive, land-based educational provision. A semi-structured format was chosen to allow exploration of delivery structures, safeguarding requirements, and funding arrangements while remaining responsive to practitioner expertise (Ghesquière et al. 2004). The interview guide drew on published guidance emphasising open-ended, neutral questioning and conversational phrasing to build rapport and elicit depth without leading responses (Turner 2010; Jamshed 2014). An organisational feasibility assessment examined spatial

capacity, visitor flow, and environmental constraints through documentation review and structured observation, contributing to Objective 2. Where direct owner confirmation of spatial details was not possible, named assumptions are clearly identified — transparent assumption is more analytically useful than an unacknowledged gap.

All stakeholder touchpoints are documented in a research diary (Appendix D).

2.3 Limitations and Transparency

Two limitations require acknowledgement. First, one planned comparator interview — with CHAOS Farm in Veryan — was not completed after the organisation stopped responding to two arranged dates (Appendix D, entry 5). Greater analytical weight was placed on the Kehelland interview (Appendix D, entry 4) and secondary data as a result. Second, one site visit was conducted without direct owner consultation on specific spatial details (Appendix D, entry 6) — a deliberate choice to prevent creating premature expectations of implementation, but this resulted gaps in data collection. Where assumptions are made, they are clearly named to address this transparently.

2.4 Ethics

Ethics approval was obtained prior to data collection. All participants gave informed consent. The research involves professional stakeholders only, with no direct engagement with service users. The researcher's professional background is acknowledged as positionality and tested against evidence throughout. A prior orientation toward social value models is also acknowledged; particular care has been taken to evaluate proposals against financial and operational criteria rather than privileging social value in isolation.

3. Evidence

3.1 Provision Landscape

3.1.1 The Case for Land-Based Provision

The evidence for land-based approaches with adults with learning disabilities is growing, if not yet conclusive. Rotheram et al. (2017) found that adults with learning disabilities described care farm environments as positive and life-enhancing, contrasting them with conventional day services in terms of purpose, belonging, and autonomy. Broader research supports improved confidence and behavioural engagement in outdoor settings (Waite 2017; Szczytko et al. 2018), with Leck et al. (2015) linking care farm participation to improvements in wellbeing and self-efficacy. The consistent finding is that land-based environments offer something structurally different from indoor day services: purposeful activity, environmental engagement, and social participation within a single setting.

These benefits are significant given the health profile of the intended population. Adults with learning disabilities experience co-occurring mental health conditions at rates substantially above population averages — 40.9% in the largest UK prevalence study (Cooper et al. 2007), with meta-analytic evidence at 33.6% (Mazza et al. 2020). These disparities compound patterns of social exclusion (Emerson and Hatton 2007). Land-based provision therefore addresses not only skill development but a broader wellbeing deficit.

The quantitative evidence base remains limited. Murray et al. (2019) systematic review found insufficient controlled outcome data to draw firm conclusions. The literature establishes a strong directional argument, not a proven model — sufficient to justify investigation, not implementation without further local validation.

3.1.2 The Employment Gap

Figure 4: Infographic "The Employment Gap"

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025). Data: NHS England (2024); Mencap (2025)

The employment gap is well documented, but the mechanism that produces it is the transition from education to adult life. The move from children's to adult services at eighteen is widely described as abrupt and disjointed (Challenging Behaviour Foundation 2026; Shore 2026). Ofsted and Care Quality Commission (2024) found local partnerships effectively withdrew during the critical period between sixteen and eighteen. A House of Lords Public Services Committee (2024) concluded that young disabled people face barriers at every stage from education to work.

Figure 5: Infographic “The transition cliff edge”

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025) and Chat GPT 5.4 Thinking Image generation OpenAI (2025). Data: Department for Work and Pensions (2025); House of Commons Library (2026).

National policy increasingly recognises this failure. The adult social care reform white paper and the Preparing for Adulthood framework both identify employment and community participation as central priorities (Preparing for Adulthood 2013; Department of Health and Social Care 2022). The data and the policy direction converge demonstrating there is a specific, evidenced need for age-appropriate, employability-focused provision for young adults with learning disabilities during and beyond the transition period.

3.1.3 The Cornish Provider Landscape

A structured secondary review identified thirteen providers across Cornwall, assessed against three criteria: LD-specific provision, land-based or outdoor delivery, and employability focus. Full provider records are in Appendix A; geographic distribution is mapped in Figure 6.

Figure 6: Cornwall Provider Landscape

Author's own, produced using Canva Pty Ltd (2026) and Claude Sonnet 4.6 (Anthropic 2025).

Trevince sits between two population corridors — Redruth/Camborne to the north-west and Falmouth to the south-east. Within the Falmouth area, LD-specific provision is exclusively indoor. Within the Redruth/Camborne corridor, Kehelland Trust (~8 miles) combines all three criteria with a college offer for 16–24-year-olds. Drym Valley Centre (~7 miles) meets the same criteria for an adult cohort without a transition-age focus. East of Trevince, provision is notably sparse — only three providers, none meeting more than one criterion.

3.2 Spatial and Operational Assessment

3.2.1 Spatial requirements

Four spatial requirements can be derived from the evidence base established in Section 3 and direct observation at Kehelland. First, productive working environments — Rotheram et al. (2017) and Leck et al. (2015) identify purposeful activity as central to outcomes, directly observed at Kehelland where learners worked independently within an active commercial operation (Shore 2026). Second, separation from unmanaged public interaction, required by safeguarding frameworks (Ofsted 2025). Third, accessible welfare provision — breaks, toilets, and quiet spaces are widely identified as standard workplace accommodations in supported employment settings (Lindsay et al. 2018; Shore 2026). Fourth, environmental contingency — weather and seasonal exposure are recognised constraints in outdoor and care farm provision (Leck et al. 2015), with Shore (2026) confirming that outdoor spaces at Kehelland are taken out of use multiple times annually, making indoor backup a practical necessity.

3.2.2 Asset Suitability

The estate's assets were assessed against these four requirements. Full profiles and named assumptions are in Appendix E; Table 1 summarises the assessment.

Table 1: Asset Suitability Summary Matrix

Asset	Productive environment	Separation from public	Welfare provision	Environmental contingency	Potential availability
Asset 9 — Warehouse / Workshop	◐	●	◐	●	Immediate
Asset 10 — Planting Polytunnels	●	●	◐	◐	Immediate
Asset 7 — Agriculture Buildings	◐	●	◐	●	Longer term
Asset 8 — Barn	◐	●	◐	●	Post-conversion
Asset 1 — Café Building	◐	◊	●	●	With conditions
Asset 6 — Walled Garden & Greenhouses	●	◊	◐	◐	With conditions

● Met ◐ Partial / conditional ◊ Requires structured management

Author's own, synthesised from Appendix E.

3.2.3 Spatial analysis

Figure 7: Trevince Estate — spatial zone and access analysis.

Author's own, produced using Canva Pty Ltd (2025) and Claude Sonnet 4.6 (Anthropic 2025). Aerial imagery: Ordnance Survey (2026), contains OS data © Crown Copyright and database rights 202

The assets identified in Table 1 fall within two distinct spatial zones. The warehouse and polytunnels sit within a non-visitor zone with no observed public through-flow (Appendix D, entries 1 and 6), meeting safeguarding separation requirements (Ofsted 2025). The shared-use zone — café, walled garden, and barn — operates alongside visitor routes and would require managed scheduling to achieve the same separation.

Trevince is an 800-year-old working estate, and no level of investment will change that fundamental character. This is not a limitation — the un sanitised, productive quality of the environment is precisely what the evidence base identifies as generating outcomes. Rotheram et al. (2017) found that participants valued care farm settings because they felt real, not clinical. The estate offers that by default. Accessibility constraints — steep gradients, uneven surfaces, variable ground conditions — are real but individual, requiring person-by-person assessment rather than representing a structural barrier to provision.

3.3 Delivery and Funding Landscape

3.3.1 Delivery Models

The supported employment literature identifies two broad approaches to provision for people with learning disabilities: train-then-place, in which learners develop skills in a structured setting before entering the workplace, and place-then-train, in which learning happens within the employment environment itself (Vigna et al. 2023). Kehelland operates a hybrid — two years of structured preparation followed by externally supported placements with a dedicated job coach (Shore 2026).

This report identifies three delivery models available to an estate in Trevince's position. These models are distinguished by where regulatory responsibility, programme delivery, and staffing cost sit — with the provider, shared, or with the estate — drawing on the structural distinctions in the supported employment literature (Vigna et al. 2023) and the operational detail confirmed at Kehelland (Shore 2026). Table 2 compares each against the criteria most relevant to the estate's resource base (Barney 1991): operational demand, regulatory burden, staffing cost, and financial exposure.

Table 2: Delivery Model Comparison

	Host Employer	Delivery Partnership	Independent Provision
Operational demand	Low — provider carries all delivery and support	Moderate — estate provides space and coordination; provider delivers programme	High — estate carries all delivery, staffing, and coordination
Regulatory burden	Carried by provider	Shared with provider	Carried by estate
Staffing cost to estate	Zero — provider funds dedicated support worker per learner	Low — provider carries programme staff; estate contributes space management only	High — requires SEND-qualified staff not in current resource base
Financial exposure	Negligible — no direct cost to estate	Low–moderate — estate provides space at nominal cost; provider carries programme expenditure	High — full programme and infrastructure cost borne by estate

Author's own. Synthesised from Shore (2026), Ofsted (2025), Vigna et al. (2023)

The secondary evidence on employer outcomes is consistent. Beyer and Beyer (2017) found people with learning disabilities stay in employment 3.5 times longer than non-disabled co-workers, with fewer sick days and stronger punctuality. Lindsay et al. (2018) found broader improvements in company image and consumer preference. Shore described placement viability as individually assessed — not every learner or every site is a match (Shore 2026). Vigna et al. (2024) found sustained engagement of at least six months produced the strongest outcomes, with short-term arrangements less effective. The host employer model is therefore a relational entry point, not an infinitely repeatable arrangement.

3.3.2 Programme Funding

Under the host employer model, EHCP funding flows through Your Future Kernow — the impartial referral and funding gateway for young people with Education, Health and Care Plans in Cornwall. All learners must pass through it regardless of how they first encounter a provider (Shore 2026). The estate carries no funding application, no learner cost, and no administrative burden; the provider manages the entire funding relationship.

Under a delivery partnership, the provider accesses programme funding directly. The Adult Skills Fund supports post-16 SEND provision through registered further education providers on a formula basis (Adult Skills Fund 2026). The DWP funds supported internship programmes — five placement days per week plus one learning day — though Shore described the regulatory complexity as a barrier and noted that cash flow constrains scaling (Shore 2026). The Local Supported Employment Initiative allocates funding through local authorities to support adults with learning disabilities into competitive employment (Department for Work and Pensions 2025). Cornwall Community Foundation offers smaller community and social grants of up to £10,000 relevant to pilot activity or programme development (Cornwall Community Foundation 2026).

Under independent provision, the estate would need to register as a provider to access any of these funding streams directly. Full eligibility criteria, award ranges, and application details for all identified funding streams are at Appendix B.

3.3.3 Capital Funding

Three capital funding streams are directly relevant to asset development at a heritage estate. The National Lottery Heritage Fund Heritage Enterprise Grants programme funds the rescue and conversion of neglected historic buildings into productive economic use, with awards between £250,000 and £5 million and an intervention rate of up to 75 per cent of eligible project cost (Heritage Fund 2019). The programme requires applicants to demonstrate both heritage value and an economic growth component — inclusive educational provision designed into a conversion would meet both criteria. The National Lottery Heritage Grants programme operates at a smaller scale — £10,000 to £250,000 — and funds projects connecting people to heritage, with skills development explicitly included in updated guidance (Heritage Fund 2023). This route is relevant to smaller-scale asset improvement or programme development work rather than full conversion projects. The Rural England Prosperity Fund, delivered locally through Cornwall Council, supports capital projects for small businesses and community infrastructure in rural areas, with awards between £5,000 and £200,000 (DEFRA 2026).

All three streams require match-funding from the applicant. The estate's financial exposure under any capital project is therefore the residual after grant intervention, not the full project cost. Full eligibility criteria and application details are at Appendix B.

4. Feasibility and Recommendations

4.1 Feasibility Verdict

The literature and local landscape analysis established a nationally evidenced employment gap for young people with learning disabilities, driven substantially by the support cliff edge at transition from education to adult life. National data signals growing demand. Cornwall has an active provider ecosystem working to address this, but national employment data indicates the problem is worsening rather than resolving. This suggests sustained demand and an opportunity for the estate to add value by contributing to the existing provision landscape rather than duplicating it. This study does not directly assess local demand in Cornwall — the case rests on national trend data, not measured unmet need. Each recommendation that follows therefore tests demand at progressively greater commitment before the next is triggered.

Spatial analysis confirmed that the estate's configuration separates productive and visitor-facing environments without intervention, and that an immediately usable programme setting exists. Trevince is an 800-year-old working estate — no level of investment changes that fundamental character, and any provision must be designed with that reality informing every operational decision rather than treating it as a constraint to be overcome.

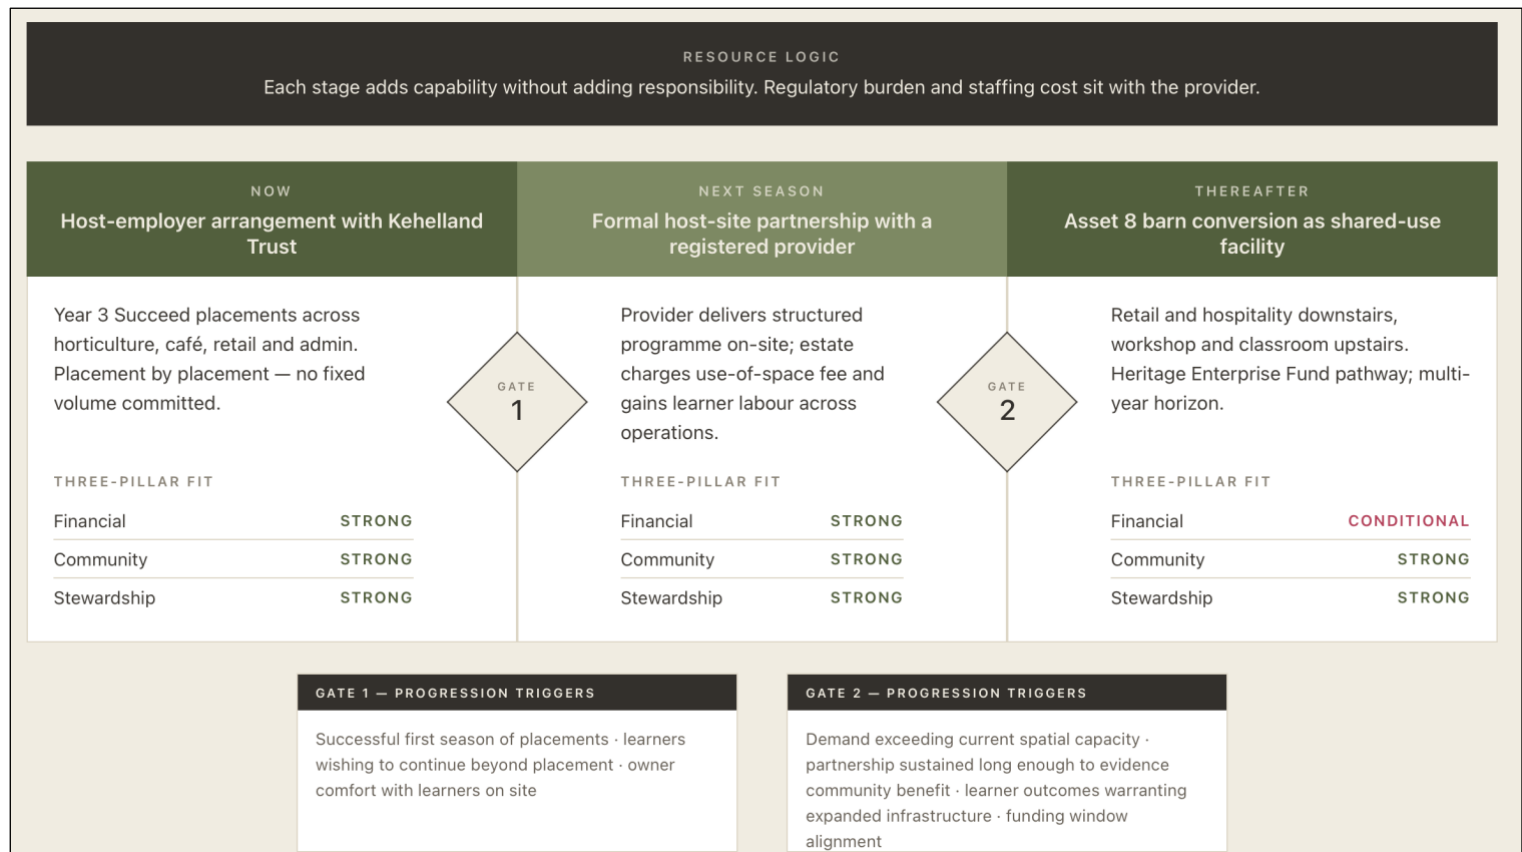

This alignment also appears to extend to the estate's stewardship mission. The 200-year planting horizon, the International Conifer Conservation seed bank, and the pollinator research partnership (Appendix D, entry 1) represent long-term environmental commitments maintained by a three-person team. Learners engaged in land management tasks — propagation, planting, grounds maintenance — could contribute directly to that work, embedding the next generation into stewardship practices the estate already sustains. Under the Resource-Based View (Barney 1991), this is not an additional demand on the estate's resource base; it is a mechanism for extending capacity within it.

Partnership and funding analysis demonstrated that delivery infrastructure and funding routes are operational in Cornwall and accessible without the estate building them independently (Shore 2026). However, providers within this landscape operate under sustained economic pressure — rising costs, constrained funding, and cash-flow limitations (Shore 2026) — and their operational models do not always align with the resource logic this report applies. The delivery models available are not guaranteed; they depend on provider capacity and willingness to partner.

The evidence indicates conditional feasibility rather than immediate implementation. The components required — need, spatial compatibility, delivery infrastructure, and funding routes — are present, but presence is not sufficiency. Whether they combine into a viable model depends on sequencing that matches the estate's resource base and alignment with the estate's three strategic pillars (Figure 2).

Three recommendations follow, structured as a staged pathway (Figure 8). Each stage is designed to build the operational evidence, stakeholder confidence, and institutional capability that the next requires — the first produces the provider relationship and on-site experience needed to formalise the second; the second produces the community track record and sustained engagement that unlocks capital funding for the third. The sequencing follows effectuation logic (Sarasvathy 2001), committing only what can be absorbed at each stage, with stage-gate conditions (Cooper 1990) requiring defined evidence before escalation. Each stage can stop without material loss.

Figure 8: Staged Recommendations Pathway

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025)

Each recommendation is presented as a summary card setting out the operational specification — what, who, when, spatial assets, and resource implications. This format is a deliberate communication choice: leading with the conclusion so the supporting argument can be read separately (Minto 2009), and structuring outputs so that a three-person team without specialist consultancy experience can make informed decisions directly (Rasiel 1999; Block 2011). The cards also serve the wider consultancy group — producing outputs that peer researchers can present to the client independently supports the collaborative delivery model the brief requires. These frameworks originate in corporate consultancy practice and assume organisational readiness to act, which cannot be assumed here. The underlying principle holds regardless: actionable communication increases the likelihood of evidence being used. Each card is followed by a discussion that argues the strategic case, triangulating secondary research, primary evidence, and theoretical analysis against the estate's resource base and strategic configuration (Stake 1995).

4.2 Host-employer arrangement with Kehelland Trust

Figure 9: Recommendation card 1

Recommendation 1: Host employer arrangement with Kehelland Trust			STAGE 1 — IMMEDIATE
WHAT	WHO	WHEN	
Host employer for Year 3 Succeed placement learners. Placements combine shadowing with independent work. Multiple learners possible; commitment remains placement by placement.	Kehelland provides and funds a dedicated support worker per learner. Trevince provides tasks and supervision context. No additional staffing required.	Immediate. No development, no capital expenditure, no regulatory registration required.	
PLACEMENT AREAS	RESOURCE IMPLICATIONS	ESTIMATED VALUE	
Horticulture Grounds maintenance Café and retail Administrative tasks	Zero staffing cost. Zero regulatory burden — carried entirely by Kehelland. Negligible financial exposure.	Combined labour and opportunity cost: £4,500–£9,000 per learner per year, base case ~£6,800. Full workings at Appendix F.	
STAGE-GATE CONDITIONS TO TRIGGER R2		WHAT THIS STAGE BUILDS	
- Successful first season of placements - Evidence of learners wishing to continue working at the estate - Owner comfort with learners on site		Provider relationship with Kehelland. Operational evidence of learners working on site. Owner confidence in the model. Reputational signal to the community.	

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025)

The host employer model aligns with all three strategic pillars at minimal exposure. It generates labour value without adding staffing cost, produces a visible community contribution without requiring public communication, and extends the estate's stewardship logic by embedding purposeful land-based activity into its existing operations. Under the Resource-Based View (Barney 1991), this is the decisive advantage: the model does not require the estate to acquire any capability it does not already hold.

The secondary evidence supports the case. Beyer and Beyer (2017) found employees with learning disabilities demonstrate stronger retention and punctuality than non-disabled co-workers — relevant to an estate where continuity of help matters more than peak productivity. Lindsay et al. (2018) identified reputational and consumer-preference benefits for employers of people with disabilities, directly applicable to Trevince's community-facing position.

Three honest limitations apply. First, the model is not truly zero-burden. Owner time is required for induction, task-setting, and relationship management with Kehelland — the "zero staffing cost" claim refers to funded support workers, not to the estate's own coordination effort. Second, the financial estimates rest on stated assumptions — the productivity discount, opportunity cost rate, and operational weeks are all defensible but untested (Appendix F). The value is directional, not precise. Third, and most fundamentally, the model depends on Trevince being somewhere a learner actively chooses to work. Shore was explicit: placement viability is assessed person by person, led by learner interest (Shore 2026). The estate's suitability is not for this report to determine — it is for a learner and their support team to decide. Shore's central advice — "be somewhere people want to work" — is the condition this recommendation cannot guarantee, only enable

4.3 Host-site partnership with a registered provider

Figure 10: Recommendation card 2

Recommendation 2: Host-site partnership with a registered provider			STAGE 2 — NEXT SEASON
WHAT	WHO	WHEN	
A registered provider delivers structured programme activity on-site on a fixed schedule. The estate acts as host site, not host employer — it provides space, charges a use-of-space fee, and benefits from learner labour. It does not deliver programme content or carry regulatory responsibility.	Registered provider carries all programme delivery, staffing, and regulatory responsibility. Trevince provides spatial assets and operational coordination. Regulatory burden shared but weighted toward the provider.	Following a successful first season of R1 placements. Requires formalised partnership agreement and scheduling but no capital expenditure or regulatory registration from the estate.	
PROGRAMME AREAS	RESOURCE IMPLICATIONS	ESTIMATED VALUE	
Structured horticulture Land management Hospitality skills Employability development	Low staffing cost — provider carries programme staff. Estate contributes space management and coordination. Use-of-space fee set at £75/day as a nominal rate reflecting mutual benefit rather than commercial letting.	Use-of-space fee: £6,000/year (base). Combined value including labour and opportunity cost: ~£18,000/year, sensitivity £10,000–£28,000. Full workings at Appendix F.	
STAGE-GATE CONDITIONS TO TRIGGER R3		WHAT THIS STAGE BUILDS	
1. Demand exceeding current spatial capacity 2. Partnership sustained long enough to evidence community benefit 3. Heritage Enterprise Fund application window		Sustained provider partnership. Evidenced community benefit track record. Operational data on learner volumes and spatial use. Eligibility foundation for Heritage Enterprise Fund application.	

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025)

The partnership model addresses R1's structural limitation. Shore was explicit that placements are assessed individually and are not infinitely repeatable (Shore 2026). Vigna et al. (2024) found sustained engagement of at least six months produced the strongest outcomes, with short-term arrangements less effective. The placement-by-placement arrangement of R1 cannot guarantee that duration; a formalised partnership with scheduled programme days structurally can. This is the primary justification for escalation.

Under the Resource-Based View (Barney 1991), the model remains within the estate's capability boundary. The estate provides what it already has — space, productive land, and working context — while the provider carries what the estate cannot build: programme design, SEND-qualified staffing, and regulatory compliance (Ofsted 2025). Rotheram et al. (2017) found participants valued care farm environments because they felt purposeful and authentic rather than clinical. Trevince's 800-year working character, identified in Section 4 as a feature rather than a limitation, directly satisfies this condition without modification.

The financial case strengthens materially. A nominal use-of-space fee of £75 per day (Appendix F, assumption A6), set to reflect mutual benefit rather than commercial letting, generates £6,000 per year across two programme days over forty weeks (Appendix F). Combined value including labour and opportunity cost recovery is approximately £18,000 per year, with a sensitivity band of £10,000–£28,000 (Appendix F). These estimates compound assumptions across productivity, opportunity cost rate, and operational weeks — each individually defensible but collectively untested.

Three limitations require acknowledgement. First, scheduled programme activity increases the estate's operational demand. R1 asks the owners to welcome a learner; R2 asks them to coordinate recurring access, manage spatial scheduling, and maintain a working relationship with a provider organisation — a qualitatively different commitment. Second, although Section 4 identified indoor contingency assets, regular programme days require those spaces to be maintained as readily available alternatives, not repurposed between sessions. Third, finding a willing provider is not guaranteed, and the right provider will need time to understand the site, develop appropriate programming, and build their own operational capacity before delivery begins. Partnership is not a transaction — it is a relationship that both parties must invest in.

4.4 Barn conversion as a shared-use facility

Figure 11: Recommendation card 3

Recommendation 3: Barn conversion as a shared-use facility			STAGE 3 — THEREAFTER
WHAT	WHO	WHEN	
Conversion of Asset 8 under the estate's existing development intent. Retail and hospitality on the ground floor, workshop and classroom space on the first floor. Inclusive programme use designed in from the outset.	Estate leads conversion and retains ownership. Registered provider delivers programme on first floor under continued partnership model. Ground-floor operation subject to separate operator arrangement.	Multi-year horizon. Triggered only when R2 stage-gate conditions are met. Requires Heritage Enterprise Fund application and planning reapplication.	
FACILITY USE	CAPITAL EXPOSURE	ESTIMATED RETURN	
Full-day programme delivery Dedicated welfare provision Retail and hospitality Indoor contingency	Base case project cost: £400,000 (sensitivity £250,000–£600,000). Heritage Enterprise Fund intervention at up to 75%. Estate match-funding exposure: ~£100,000 (sensitivity £62,500–£150,000).	First-floor rental at £150/day across three programme days: ~£18,000/year. Payback on match-funding: 4.7–5.6 years. Ground-floor commercial revenue not banked. Full workings at Appendix F.	
CONDITIONS MET BEFORE TRIGGERING		WHAT THIS STAGE UNLOCKS	
1. Demand exceeding current spatial capacity 2. Partnership sustained long enough to evidence community benefit 3. Heritage Enterprise Fund application window		Full-day programme offer with dedicated welfare and indoor contingency. Larger learner cohort capacity. A significant heritage asset returned to productive use, aligning inclusive provision with the estate's own strategic ambition for the building.	

Author's own, produced using Claude Sonnet 4.6 (Anthropic 2025)

R3 addresses what the first two stages structurally cannot deliver: a full-day programme offer with dedicated welfare provision, indoor contingency, and capacity for a larger learner cohort. Section 4 identified that the estate's immediately available assets meet the spatial requirements partially — welfare provision is not adjacent to primary programme environments, and environmental contingency depends on secondary spaces remaining available. A purpose-converted facility resolves both by design rather than improvisation.

The investment case requires careful framing. The estate's exposure is the match-funding position, not the full project cost. At the Heritage Enterprise Fund's intervention rate of up to 75 per cent (Heritage Fund 2019), base case match-funding is approximately £100,000 (Appendix F, assumption A12), with a sensitivity range of £62,500–£150,000 depending on project specification. Framing the decision around the full £400,000 misstates the question — the Fund exists precisely because the project delivers heritage and community benefit that justifies public investment. First-floor rental at £150 per day

(Appendix F, assumption A13) across three programme days generates approximately £18,000 per year (Appendix F), with payback on match-funding within 4.7–5.6 years. The outdoor use-of-space fee from R2 continues alongside this. Ground-floor café and retail extends the estate's existing visitor-facing offer, with supported employment placements integrated into those operations — creating a direct pathway from structured programme activity into real working roles. Commercial revenue from the ground floor is treated as upside rather than banked (Appendix F, assumption A15).

The critical advantage is strategic alignment. The estate already intends to convert this building (Appendix D). This recommendation does not propose a new direction — it integrates inclusive provision into an existing ambition, designing in accessibility and programme infrastructure from the outset rather than retrofitting later. Under the Resource-Based View (Barney 1991), this is the moment the estate acquires new capability — but it does so through capital investment and partnership, not by attempting to build delivery expertise internally.

Four limitations apply. First, the capital estimates are assumptions, not quotations — the base case updates the owners' earlier estimate for inflation and accessibility specification (Appendix F, assumption A10) but has not been tested against architectural or contractor pricing. Second, the Heritage Enterprise Fund application is competitive, not guaranteed. The staged approach mitigates this — the community benefit track record generated by R1 and R2 strengthens the application, but approval remains outside the estate's control. Engaging a specialist heritage bid writer at application stage would further reduce this exposure, improving application quality at modest cost relative to the grant value sought. Third, provider dependency intensifies at this scale. A dedicated facility designed around programme use requires a committed provider relationship; if that relationship fails, the space must find alternative occupancy. Diversifying provider relationships before committing to conversion would reduce this exposure. Fourth, ground-floor commercial revenue is deliberately excluded from the base case because it depends on operator arrangement and marketing capability the estate does not yet demonstrate (Appendix F, assumption A15). Stating this openly is more defensible than assuming a commercial uplift the conversion itself does not guarantee.

4.5 Conditions for success

The three recommendations each demonstrate alignment with the estate's strategic pillars (Figure 2). But strategic alignment is necessary, not sufficient. The staged pathway is designed to manage risk, but it cannot eliminate it. The following conditions must hold for the model to work as argued.

First, institutional will. This report establishes technical feasibility — it cannot establish that the owners want to do this. The decision to welcome learners onto a family estate is personal as much as strategic, and no amount of evidence substitutes for that commitment. R1 is deliberately designed as a low-cost way to test whether the reality of inclusive provision matches the concept, but proceeding without genuine owner engagement would undermine every stage that follows.

Second, provider viability. All three recommendations depend on Cornwall's provider ecosystem — an ecosystem this report has identified as operating under sustained economic pressure (Shore 2026). R1 depends on Kehelland's willingness to place learners; R2 depends on a provider committing scheduled programme days; R3 depends on that relationship enduring long enough to justify capital investment. At no point does the estate control both sides of the partnership. Diversifying provider relationships across the staged pathway would reduce this exposure, but the evidence base for doing so must be built through R1 and R2 rather than assumed in advance.

Third, demand validation. The case rests on national trend data and a structural gap in provision type, not on measured local demand. Each stage tests demand at progressively greater commitment. If uptake is low, the stage-gate conditions prevent escalation. The model is designed to fail safely; the conditions require that the gates are applied honestly rather than optimistically.

Fourth, financial discipline. Every financial estimate is stated as an assumption with a defined sensitivity range (Appendix F). The base cases are defensible but untested. The owners must treat them as directional indicators, not forecasts. The staged model allows correction before exposure compounds.

Finally, a boundary must be acknowledged. This report evaluates feasibility through the estate's three strategic pillars — financial sustainability, visitor and community engagement, and stewardship-led practice — and tests resource readiness under the Resource-Based View (Barney 1991). It does not independently assess social value creation, measure learner outcomes, or evaluate the quality of provision that a partner would deliver. Those assessments belong to the provider, the commissioning framework, and the learners themselves. The researcher's positionality statement in Section 2 acknowledged a prior orientation toward social value models and committed to evaluating proposals against financial and operational criteria rather than privileging social value in isolation. This report has honoured that commitment. The business case has been conditionally made — each recommendation demonstrates alignment with the estate's strategic configuration and financial viability within stated assumptions. What remains is the owners' decision to proceed, and the staged pathway ensures that decision can be tested, adjusted, or reversed at every stage.

APPENDIX A: Provider Landscape Database: Cornwall Inclusive Land-Based and Outdoor Education Provision

March 2026

Data collected via provider websites, Charity Commission for England and Wales, Companies House, Cornwall Council CHOICE platform, and Cornwall Community Foundation records. Thirteen providers were identified based on geographic proximity, LD-specific provision, land-based activity, or comparator value for the proposed Trevince model. Driving distances are approximate, calculated from TR16 6AX using a 1.35 road-factor applied to straight-line haversine distances. Data verification status is recorded at field level: Verified = cross-referenced from two or more sources; Unverified (*) = single source only; Unknown = not publicly disclosed.

#	Organisation	Location	Drive	LD-specific	Land-based	Employability	Qualification pathway	Age group
1	Kehelland Trust	Camborne, TR14 0DD	~8 mi	Y	Y	Y	Y — OCN London (Achieve, Advance, Succeed); DofE	16–24 (ed.); 18–65 (day)
2	Trelya	Penzance, TR18 3PE	~23 mi	Y	Y*	Y	Y — Maths, English, Digital Skills	8–25
3	Holifield Farm Project	Gweek, Helston, TR12 6UJ	~12 mi	Y	Y	Unknown	Unknown	18+
4	Drym Valley Centre	Praze, Camborne, TR14 0NU	~7 mi	Y	Y	Y	Y — NPTC (City & Guilds) *	18+
5	The Bridge (Corserv Care)	Falmouth, TR11	~9 mi	Y	N	Unknown	N	18+
6	CHAOS Farm	Veryan, TR2 5PJ	~12 mi	Y*	Y	Y*	Y* — unspecified accredited	Mixed
7	FalCare CIC	Falmouth, TR11 2DA	~9 mi	Y	N	Unknown	Unknown	18+
8	Highway Farm Activity Centre	Four Lanes, Redruth, TR16 6QA	~2 mi	N	Y	N	N	Children
9	Moorvue Farm and Rural Centre	Nr Madron, Penzance, TR20 8NP	~23 mi	Y	Y	N	Unknown	18+

#	Organisation	Location	Drive	LD-specific	Land-based	Employability	Qualification pathway	Age group
10	The Eden Project	St Austell, PL24 2SG	~30 mi	N	Y	Y	Y — degrees, apprenticeships	All ages
11	Tregovenek	Pensilva, Liskeard, PL14 5QU	~54 mi	N	Y	N	N	All ages
12	Woodford Community Garden	Morwenstow, EX23	~73 mi	N	Y	N	N	All ages
13	The Gardeners' House	Penzance, TR18 4DA	~23 mi	N	Y	N	N	65+ (dementia)

* = Unverified — single source only

APPENDIX B: Grant Funding Landscape: Capital Development, Programme Delivery and Supported Employment

April 2026

Data collected via funder websites, GOV.UK, Cornwall Community Foundation, British Association for Supported Employment, and National Lottery Heritage Fund documentation. Seven funding streams were identified based on relevance to capital asset development, inclusive educational provision, or supported employment outcomes at a rural heritage estate in Cornwall. Eligibility criteria, award levels and application windows are subject to change and should be verified with the relevant funder prior to any application.

Funder	Stream	Type	Award Range	Relevance to Trevince	Eligibility Note
Capital Development — Asset Conversion and Infrastructure					
National Lottery Heritage Fund	Heritage Enterprise Grants	Capital	£250k – £5m	Designed to rescue neglected historic buildings and return them to productive use through economic activity. Asset 8 barn conversion is directly relevant. Requires an economic growth component.	Commercial organisations eligible when working in partnership with a community organisation. Strong alignment with Trevince heritage identity.

Funder	Stream	Type	Award Range	Relevance to Trevince	Eligibility Note
National Lottery Heritage Fund	National Lottery Heritage Grants	Capital	£10k – £250k	Funds projects connecting people to heritage. Skills development explicitly included in updated 2025 guidance. Applicable to smaller-scale asset improvement or programme development work.	Not-for-profit organisations. Partnership with Trevince as a private estate may be required.
Rural England Prosperity Fund (DEFRA)	Delivered via Cornwall Council	Capital	£5k – £200k	Supports capital projects for small businesses and community infrastructure in rural areas. Directly relevant to asset development in a rural Cornwall setting.	Businesses, community groups and local councils. Delivered locally — confirm current round status with Cornwall Council.
Programme Delivery — Education and Skills Funding					
Your Future Kernow	EHCP Placement Funding Gateway	Revenue	Per-learner allocation	Established Cornwall gateway for young people with EHCPs. All Kehelland learners funded through this route. Trevince as host employer accesses this indirectly via a provider partner — no direct application required.	Accessed via a registered provider. Host employer carries no funding burden. Most immediately accessible route for Trevince.
Adult Skills Fund (DfE)	Post-16 SEND provision	Revenue	Formula-based	Funds education and training for learners with EHC Plans up to age 25. Directly funds structured provision equivalent to the Kehelland model. Relevant if Trevince were to establish its own provision longer term.	Registered providers only. Not directly accessible to Trevince as a standalone employer — requires partnership with a registered FE provider.
Supported Employment — Employer-Facing Funding					
Local Supported Employment (LSE) Initiative	DWP / Local Authority	Partnership	£7.6m national — local allocations	Government initiative funding local authorities to support adults with learning disabilities and autism into competitive employment. Includes job coaching, employer engagement, and in-work support.	Delivered through local authorities to employers. Cornwall Council involvement required. Confirm local allocation status.
Cornwall Community Foundation	Community and social grants	Revenue / Capital	Up to £10k	Multiple streams relevant to disability inclusion, community benefit, and rural provision. Smaller scale but accessible and	Charities, CICs and voluntary organisations. Partnership with a registered organisation

Funder	Stream	Type	Award Range	Relevance to Trevince	Eligibility Note
				Cornwall-specific. Useful for programme development costs or pilot activity.	likely required for estate-led activity.

* = Eligibility requires verification with funder

APPENDIX C: Kehelland Trust — Interview Record

Participant: Adam Shore, Head of Education

Interviewer: Jake Buck, Falmouth University (BUS326)

Date: 23 March 2026

Time: 09:30

Format: Walking tour and conversation

Recording: Not recorded — verbal consent obtained from Adam Shore; notes taken during visit and written up immediately afterwards

Contact: Adams@kehellandtrust.org.uk

1. Personal Journey

Question: *Tell me a little about yourself and how you came to be involved in land-based education for people with learning disabilities.*

Adam came from a retail background before moving into support and education. He trained as an adult tutor, progressed through compliance and leadership roles, and joined Kehelland in 2018, working his way up to Head of Education. He described the organisation as having grown very quickly, continually diversifying its funding streams and ways of working. Costs are rising disproportionately faster than the funding the organisation receives.

Kehelland was established in 1982 as a charity trust. It currently supports 35 learners in the college (aged 16–25) and 70 participants in the day service. Taster sessions are used as an onboarding route for both new college learners and day service participants.

2. Organisation Mission and Activities

Question: *Could you briefly describe your organisation's mission and the kinds of land-based activities you offer?*

Adam described the mission as providing a rural, horticultural, physical and social activity setting that connects participants to the wider community.

The college offer comprises three sequential one-year programmes:

Year 1 — Achieve: life skills, independent living, soft skills

Year 2 — Advance: cooking, tenancy safety, employability skills, timekeeping — two classroom days and one internal work experience day per week

Year 3 — Succeed: external work experience placements

On-site activities include horticulture, maintenance and grounds, catering and kitchen production, retail sales in the on-site shop and Camborne high street store, online ordering, Christmas trees, and a structured events programme — including half-term whatson Wednesdays, bird box making, wildlife surveys and wildlife camping.

Produce includes jams, chutneys, preserves and apple juice. Approximately 2,000 bottles of apple juice are produced annually from the site's orchard. Community pressing events are also held where local people bring their own apples. Kehelland operates a community green grocer model with local suppliers.

Adam stated explicitly that the income streams are deliberately interconnected — the marketing writes itself and each stream grows the others' customer base organically.

Your Future Kernow is the formal referral and funding gateway. Adam described it as the impartial body that directs young people with EHCPs toward appropriate provision. All learners must pass through it regardless of how they first hear about Kehelland.

Skidders Brewery made a donation toward construction of a bird hide in the nature area.

3. Session Experience

Question: *Could you walk me through what a typical day or session feels like for participants and staff?*

This question was answered largely through direct observation during the walking tour. The following was recorded:

- A classroom group was buying train tickets for a public transport training session to the beach; others were conducting checks on the minibuses
- A group in the greenhouses was doing planting tasks
- Learners in the retail space were cleaning and stocking
- Orchard
- Polly tunnels
- Multiple greenhouse

The front of the site is public-facing, housing dry goods, bird houses and fresh produce retail. The kitchen is commercial grade and not open to the public — used for breaks and production.

Staff were letting people get on with their work. When spoken to, everyone encountered was open, friendly, kind and engaging. Every person spoken to was passionate about the site and what they do. The general atmosphere was warm, friendly, busy and open.

4. Participant Pathways and External Placements

Questions:

- *How do people usually find their way to your programme?*
- *And for your more advanced learners — do some of them go out to external placements? How does that side of things work?*

Referral routes are mixed — self-referral through taster sessions, schools and families — but all learners must formally pass through Your Future Kernow as the EHCP funding and pathway gateway.

For Year 3 Succeed learners, placements are led by learner interest. Support staff and coordinators then scout and vet placements for safety, relevance and quality.

Adam referenced the organisation's rapid growth on multiple occasions throughout the conversation. He explicitly described a **“cliff edge” of support** after the programme ends, noting that not all learners transition smoothly. Onward routes include employment, specialist courses and further independent living skills development.

5. Support, Inclusion and Safety

Question: *What kinds of support or accommodations help participants feel safe and included?*

Adam described the employer engagement process as starting with apprehension, progressing through site visits, transition, task-by-task risk assessment and sharing of individual support plans. Flexible working adjustments are standard — including bigger lunch breaks and access to quieter spaces. He noted employers are better established at supporting physical disabilities and is are developing its capability around mental health and neurodivergent needs but as they are not as obvious it is harder to communicate the need.

A Kehelland support worker accompanies every learner to external placements. This is funded by Kehelland — the host employer carries no staffing cost for support.

Adam referenced the SEND Employment Forum and Diversity to Thrive as a useful network promoting different working models to increase supported employment.

On accreditation, he was direct: Disability Confident is not vetted or checked and is therefore not a meaningful signal of genuine commitment. He recommended a more rigorous framework, referencing B Corps-style accreditation as a more credible option.

He was clear that work is not always a viable option — medical needs may mean the priority is keeping someone safe. For these learners, a secondary pathway supports transition to adult social care. Not all learners stay until 25.

6. Resources, Funding and Partnerships

Questions:

- *What keeps your programme running in terms of funding, resources and supportive partners?*
- *Are there local businesses or organisations you work with to provide those external experiences — and what does a good host look like from your perspective?*

Work experience takes place on Tuesdays. Kehelland reaches out to employers and has strong local connections. It provides supported 1:1 accompaniment for work experience including travel support, funded by Kehelland.

The Victoria Inn was given as a partnership example — careers hub newsletters were used to build the relationship and Adam said this process made them better as a team with broader knowledge across different teams.

Kehelland is exploring a **supported internship programme**: five placement days per week plus one learning day, funded through the DWP. Adam described this as a headliner provision for SEND but noted it is not compatible or flexible enough for learners who cannot sustain five days per week. DWP funding is not easy to set up — regulatory complexity is the barrier. Cash flow is a current constraint on scaling it.

Other employer partnerships mentioned: BHS charity shops, hotels, seal sanctuary.

Funding streams include Your Future Kernow, Cornwall adult education funding and DWP. Apple juice production — 2,000 bottles — generates income.

7. Outcomes and Joy

Question: *What changes or benefits have you seen in participants, and what parts of your work bring you the most joy?*

Learners becoming employees does happen but is difficult — commercial viability is the constraint. People are trusted with different jobs and take pride in that responsibility.

Commercial contracts include wedding venue confetti production and Cornwall Council hanging basket contracts. Participants take pride in taking production through to finished products.

A deliberate seasonal job-banking approach is used — tasks such as label cleaning are saved for later in the year to maintain activity during slower months. Adam described staff and learners as inventive and imaginative in keeping the operation purposeful year-round. Printer plants are used to keep greenhouses warm during colder periods.

Functional skills are delivered through an awarding body — to be confirmed with Adam via email before citing.

8. Challenges

Questions:

- *Could you share some of the challenges you've faced and how you've navigated them?*
- *Have you ever placed learners in visitor-facing or public environments — somewhere like a café or garden open to the public?*

Adam described a young man from a difficult background who wanted to work in maintenance. Kehelland worked with him and eventually secured a hotel placement. Public transport was a barrier.

On visitor-facing placements, Adam did not give a direct yes or no. He said risks are assessed on an individual basis and that reasonable adjustments are more commonly required for mental health and neurodivergent needs than for physical disabilities.

Martyn's Law was raised in the context of events regulation — relevant for public-facing activity and inside venues, which Adam described as very valuable.

Environmental risk is significant: greenhouses are taken out of use multiple times per year due to heat and wind speeds. Kehelland lost polytunnels in a recent storm. Outdoor provision requires ongoing risk management.

9. Guidance for Trevince Estate

Questions:

- *What guidance or hopes would you offer for an estate like Trevince?*
- *Trevince is a heritage estate with a café, open gardens and land management work — does that sound like somewhere you'd consider for external placements?*

Adam expressed interest in what Trevince does but gave no specific commitment — placement viability is assessed person by person. He referenced specialist courses such as bricklaying as examples of onward pathways learners might pursue.

His key advice: **“be somewhere people want to work.”**

He described Kehelland’s approach as deeply holistic — finding out in detail what each person wants to do and why, then working out how to make it happen. The overall visit was a positive experience; staff were happy to share what they do.

Key Quotes

- *“Be somewhere people want to work”* — Adam Shore
- *“The cliff edge of support”* — Adam Shore

APPENDIX D: Research Engagement and Stakeholder Touchpoint Log / Research diary

April 2026 (retrospective)

This log documents all primary research engagements and meaningful stakeholder touchpoints conducted during the study. Each entry records what took place, who was involved, what was produced, and how the engagement shaped the direction and analysis of the research. The failed CHAOS Farm engagement is included as a documented methodology limitation.

#	Date	Activity	Participants	Format	Outputs	Influence on Research
1	03 Feb 2026	Initial site meeting and estate tour	Richard & Trish Stone (owners); Colin & Tamsyn (grounds managers); Yr 2 & Yr3 CBS students	In person — guided tour and open conversation	Photographic record Video footage Shared discussion document Estate history presentation	Established the estate's three strategic pillars (financial sustainability, visitor engagement, stewardship-led practice) as the evaluative framework for the study. Confirmed operational zones and spatial context. Shaped research design for Objective 2.
2	17 Mar 2026	Follow-up data and questions exchange — Trevince Estate	Richard & Trish Stone; Nic Hawkins	Remote — shared document exchange	Completed questions and data document from estate owners	Provided supplementary estate data to support spatial and operational analysis. Confirmed details used in the named assumptions framework applied in Objective 2.
3	Feb–Mar 2026	Provider landscape research — collaborative secondary research	Team A	Collaborative desk research — multi-student coordination	Appendix A: Provider Landscape Database (13 providers)	Produced the evidence base for the gap analysis in Objective 1. Confirmed no provider within the catchment combines LD-specific, land-based, and employability-focused provision simultaneously — the foundation of the demographic provision gap argument.
4	23 Mar 2026	Semi-structured interview and site visit — Kehelland Trust	Adam Shore (Head of Education, Kehelland Trust); Jake Buck	In person — walking tour and semi-structured interview	Kehelland Trust Interview Record (Appendix C)	Primary comparator insight. Confirmed the fully funded support worker model, the Your Future Kernow funding gateway, and the host employer placement structure. Adam Shore's guidance — 'be somewhere people want to work' — directly shaped the framing of

#	Date	Activity	Participants	Format	Outputs	Influence on Research
						Objective 3 and the feasibility recommendations.
5	24 Mar 2026	CHAOS Farm — planned interview; contact lost	CHAOS Farm (Veryan); Jake Buck	Planned semi-structured interview — did not proceed	Documented non-engagement — methodological limitation noted	Rearranged twice before contact ceased. Documented transparently as a methodology limitation. Greater analytical weight was placed on the Kehelland Trust interview and secondary sources as a result.
6	28 Mar 2026	Independent site observation visit — Trevince Estate	Jake Buck	In person — structured observation	Site visit observation notes Photographic record	Enabled direct spatial assessment of functional zones, visitor flow, and asset condition. Confirmed the productive working zone and visitor engagement zone distinction used in Objective 2. Named assumptions framework applied where direct owner consultation was not possible.
7	15 Apr 2026	Update meeting — Trevince Estate at Cornwall Business School	Richard & Trish Stone; Yr 2 & Yr3 CBS students	In person — update and discussion meeting	Meeting notes	Confirmed current strategic direction and allowed verification of key assumptions ahead of finalising the recommendations in Objective 4.

APPENDIX E: Asset Suitability Assessment: Trevince Estate

March–April 2026

Assessment conducted through two primary research engagements: an initial site visit and stakeholder meeting on 3 February 2026 (Appendix D, entry 1) and an independent structured site observation on 28 March 2026 (Appendix D, entry 6).

Where direct measurement or owner confirmation of specific asset details was not possible during the site visits — including internal dimensions, utility provision, and welfare facility locations — named assumptions are used. These are identified within each asset record with an asterisk (*) and should be verified with the estate owners before any programme planning proceeds.

Mixed-use spaces — those sitting within the visitor-facing zone but carrying potential programme relevance — are assessed separately given the additional operational considerations their public-facing context introduces.

Assets outside this assessment

Assets 2, 3 — Stables, Workshop <i>Excluded — parallel investigation</i>	
Reason for exclusion Subject to parallel investigation within the wider consultancy group.	Status Not assessed in this study.
Sources: <i>Wider consultancy group research.</i>	

Asset 4 — 12th Century House <i>Restricted — residential and heritage</i>	
Reason for exclusion Residential and heritage building under family occupation.	Status Outside scope of this assessment.
Sources: <i>Research diary (Appendix D).</i>	

Asset 5 — Property Renovation <i>Under active development</i>	
Reason for exclusion Currently under active renovation. Planning approved.	Status Not available for programme consideration at this time.
Sources: <i>Research diary (Appendix D).</i>	

Immediately accessible assets

Asset 9 — Warehouse / Workshop <i>Immediately accessible — no development required</i>	
Observed condition Operational enclosed workspace. Directly observed during site visit.	Internal dimensions Not confirmed during site visit. *
Productive environment Partial — offers working space but not an active productive growing operation in current form.	Separation from public Met — sits outside visitor circulation zone with no observed public footfall.

Welfare provision Partial — toilet facilities not immediately adjacent, accessible within the café (Asset 1).	Utility provision Water and power assumed present based on operational use. Not confirmed directly. *
Environmental contingency Met — enclosed building provides reliable indoor backup. Non-heated.	Accessibility Accessed via gravel path. Step-free access assumed — not formally assessed. *
<i>Strongest immediately available indoor asset. Particularly valuable as indoor contingency to complement polytunnel activity. Internal layout and utility provision should be confirmed with estate owners before programme planning.</i>	
Sources: Site observation (Appendix D, entries 1 and 6); Satellite observation (Ordnance Survey 2026).	

Asset 10 — Planting Poly tunnels <i>Immediately accessible — no development required</i>	
Observed condition Informed of productive growing activity. Previous use includes growing tomatoes.	Number and dimensions Exact number and individual dimensions not confirmed. *
Productive environment Met — most directly meets the requirement for genuine purposeful productive activity.	Separation from public Met — operates independently of visitor circulation. No public footfall observed.
Welfare provision Partial — toilet facilities not immediately adjacent, accessible within the café (Asset 1).	Utility provision Irrigation infrastructure observed in place. Power assumed present. Not confirmed directly. *
Environmental contingency Partial — poly tunnels subject to heat and wind exposure risk. Asset 9 provides necessary indoor contingency.	Accessibility Step-free access assumed. Surface conditions not formally assessed. *
<i>Most directly aligned with the productive environment requirement. Environmental risk is real and must be planned for. Asset 9 (warehouse) provides the necessary indoor contingency.</i>	
Sources: Site observation (Appendix D, entries 1 and 6); Satellite observation (Ordnance Survey 2026).	

Longer-term assets

Asset 7 — Agriculture Buildings <i>Longer term — current operational use limits access</i>	
Observed condition Largest physical footprint on the estate. Currently in operational agricultural use.*	Internal dimensions Not assessed. Scale observed externally only. *
Productive environment Partial — significant potential given scale, but current use precludes immediate programme access.	Separation from public Met — clearly separated from visitor-facing areas.
Welfare provision Unknown — not assessed during site visit. *	Utility provision Assumed present given operational agricultural use. Not confirmed. *
Environmental contingency Met — substantial enclosed agricultural structures.*	Accessibility Agricultural vehicle access observed. Pedestrian access and surface conditions not formally assessed. *

Scale makes Asset 7 relevant to longer-term spatial planning. Not the appropriate starting point. Welfare provision and internal configuration require verification.

Sources: Site observation (Appendix D, entries 1 and 6); Satellite observation (Ordnance Survey 2026).

Asset 8 — Barn

Requires development — planning reapplication needed

Observed condition Currently unusable in its present state. Observed externally during site visit.	Internal dimensions Not assessed — building not accessible in current state. *
Productive environment Partial — potential post-conversion, dependent on fit-out design. *	Separation from public Would be a mixed use asset — located within the visitor area of the estate.
Welfare provision Partial — designable from outset if conversion proceeds. Accessibility compliance can be built in. *	Planning position Planning permission for conversion previously granted — now lapsed*. Formal pre-application advice required before reapplication.
Environmental contingency Met — enclosed structure would provide full indoor contingency post-conversion. *	Accessibility Post-conversion accessibility compliance can be designed in from the outset. *

Strongest longer-term development asset. Conversion offers the opportunity to design in programme infrastructure, accessibility compliance, and welfare provision from the outset.

Sources: Site observation (Appendix D, entries 1 and 6); Planning record [ADD REFERENCE]

Mixed-use spaces — potential and considerations

The following assets sit within the visitor-facing zone of the estate. Their public-facing context introduces additional operational and safeguarding considerations. Both carry genuine programme potential but require careful consideration of how programme activity and visitor access would be managed simultaneously.

Asset 1 — Café Building

Mixed use — visitor-facing context requires consideration

Observed condition Operational café with equipment. Seats approximately 35. Directly observed during site visit.	Internal dimensions Approximately 35 covers. Full kitchen dimensions not confirmed. *
Productive environment Partial — genuine hospitality training context, dependent on café operating schedule and capacity.	Separation from public Consideration required — café is a public-facing visitor space. Individual risk assessment required per learner.
Welfare provision Met — facilities present within the café building.	Utility provision Met — operational café with three-group head machine and full kitchen equipment confirmed.
Environmental contingency Met — fully enclosed indoor space.	Accessibility Step-free access observed. Full accessibility audit not conducted. *

Café offers a distinctive and directly employability-relevant training environment. The visitor-facing context requires structured management — individual learner assessment and defined supervision would be required.

Sources: Site observation (Appendix D, entries 1 and 6)

Asset 6 — Walled Garden & Greenhouses

Mixed use — visitor-facing context requires consideration

Observed condition Productive walled garden with greenhouses. Heritage Camellia and Rhododendron collections present. Active growing observed.	Site area 18th century walled garden. Full dimensions not confirmed. *
Productive environment Met — active, genuine horticultural production environment with mix of perennial and traditional crops.	Separation from public Consideration required — walled garden is the primary paid visitor attraction. Individual risk assessment required per learner.
Welfare provision Partial — facilities not immediately adjacent. Available within café (Asset 1) nearby. *	Utility provision Water assumed present for horticultural use. Power availability not confirmed. *
Environmental contingency Partial — greenhouses offer some indoor cover but subject to heat and weather constraints.	Accessibility Main access via steady incline and uneven surface from lower entrance. Accessibility for participants with mobility needs requires further assessment.

Walled garden offers the richest horticultural programme environment on the estate. Activity during lower-footfall periods or in defined sections of the garden may reduce operational complexity.

Sources: Site observation (Appendix D, entries 1 and 6); Satellite observation (Ordnance Survey 2026).

Complementary assets

Asset 11 + Land Assets — Car Park, Wild Planting, Orchard, Tennis Courts

Complementary — supporting programme delivery

Car park (Asset 11) 50 spaces including 12 accessible bays. Meaningful accessibility infrastructure.	6 acres wild planting Varied ecological outdoor environment suited to conservation and land management activity.
Mature orchard Active productive land. Seasonal harvesting and maintenance directly relevant to programme activity.	Tennis courts (grassed) Open outdoor space, good acoustics, capacity 220. Potential for structured group activity.
Maintenance access routes Observed during site visit. Surface condition and full accessibility not formally assessed. *	Seasonal viability Assumed seasonal variation across all outdoor areas. Not formally assessed. *

Sources: Site observation (Appendix D, entries 1 and 6); Satellite observation (Ordnance Survey 2026).

APPENDIX F: Financial Assumptions Register and Workings

Every figure cited in Sections 6.3, 6.4 and 6.5 is traceable to the assumptions set out in F.1 and the per-recommendation workings in F.2, F.3 and F.4. Assumptions are presented explicitly rather than embedded, in line with the methodology established in Section 2 — transparent assumption is more analytically useful than unacknowledged estimation.

F.1 Assumptions Register

Ref	Assumption	Value used	Source / rationale
A1	Operational weeks per year	40 weeks	Allows for holidays, off-season, and environmental contingency per Shore (2026)
A2	Placement day length	6 hours	Standard Kehelland Year 3 Succeed placement pattern (Shore 2026)
A3	National Living Wage (21+)	£12.71 / hour	Statutory rate from 1 April 2026 (GOV.UK 2026)
A4	Owner time opportunity cost	£25 / hour	Conservative floor for a three-person heritage estate leadership team redirected to strategic work; deliberately understated rather than inflated
A5	Productivity band (R1)	50% / 75% / 100%	Base case 75% reflects placements building capability progressively; low case 50% is defensive floor
A6	R2 use-of-space fee	£75 / day	Nominal rate, reflecting mutual-benefit partnership
A7	R2 programme days per week	2 days (base)	Sensitivity range 1–3 days depending on partnership formalisation
A8	R2 learners per programme day	3	Consistent with Kehelland programme structure for small-group delivery
A9	R2 labour-overlap discount	50%	Half of learner activity is programme-specific rather than estate-useful; conservative
A10	R3 capital cost (base)	£400,000	Owner 2024 estimate of ~£150,000 uplifted for inflation, specification, and accessibility/welfare provision designed in; sensitivity range £250,000–£600,000

Ref	Assumption	Value used	Source / rationale
A11	Heritage Enterprise Fund intervention rate	75%	National Lottery Heritage Fund standard intervention rate up to 75% of eligible project cost (Appendix B)
A12	Estate match-funding exposure	25% of project cost	Residual after HEF intervention
A13	R3 first-floor rental rate	£150 / day (base)	Premium over R2 nominal reflecting dedicated, accessible, fit-for-purpose space with welfare and indoor contingency designed in; sensitivity £100–£200 per day
A14	R3 programme days (first floor)	3 days (base)	Expanded from R2 two days reflecting scaled partnership
A15	R3 ground-floor commercial revenue	Not banked	Potential uplift range £40,000–£80,000 per year depending on operator and marketing; excluded from base case to avoid overstating the return

F.2 Recommendation 6.3 — Workings

Labour value per learner per year (using A1, A2, A3):

$$1 \text{ learner} \times 6 \text{ hours} \times 40 \text{ weeks} \times £12.71 = £3,050 \text{ per year (100\% productivity)}$$

Productivity sensitivity (A5):

Productivity	Labour value	Owner opp. cost (A4)
Low — 50%	£1,525	£3,000
Base — 75%	£2,288	£4,500
High — 100%	£3,050	£6,000

Combined value per learner per year: £4,525 (low) · £6,788 (base) · £9,050 (high), rounded to bands of approximately £4,500 · £6,800 · £9,000 in the main text.

F.3 Recommendation 6.4 — Workings

Use-of-space fee income (using A1, A6, A7):

$$£75/\text{day} \times 2 \text{ days} \times 40 \text{ weeks} = £6,000 \text{ per year (base case)}$$

Labour value from programme-day learners (using A3, A5, A8, A9):

$$3 \text{ learners} \times 6 \text{ hours} \times 40 \text{ weeks} \times £12.71 \times 75\% \times 50\% \text{ overlap} = £3,432 \text{ per year}$$

Owner opportunity value from expanded capacity (using A4):

$$3 \text{ learners} \times 6 \text{ hours} \times 40 \text{ weeks} \times 50\% \times £25 = £9,000 \text{ per year}$$

Sensitivity scenarios:

Scenario	Fee income	Labour value	Opp. cost	Total
Low	£4,000	£1,700	£4,500	£10,200
Base	£6,000	£3,400	£9,000	£18,400
High	£9,000	£5,100	£13,500	£27,600

F.4 Recommendation 6.5 — Workings

Capital cost and match-funding exposure (using A10, A11, A12):

Scenario	Project cost	HEF contribution (75%)	Estate match (25%)
Low	£250,000	£187,500	£62,500
Base	£400,000	£300,000	£100,000
High	£600,000	£450,000	£150,000

First-floor rental income and payback on estate contribution (using A1, A13, A14):

Scenario	Rate / day	Days / week	Annual rental	Payback on match
Low	£100	3	£12,000	5.2 years
Base	£150	3	£18,000	5.6 years
High	£200	4	£32,000	4.7 years

Payback calculated on estate match-funding contribution alone, from first-floor rental alone, excluding ground-floor commercial revenue (A15) and any heritage or community-benefit grant streams supporting programme delivery. Inclusion of ground-floor revenue or additional grant streams would shorten payback materially. Full project payback (i.e. against the grant-funded portion) is not a meaningful figure because the grant is awarded on heritage and community benefit, not expected commercial return.
